

NPCI/2018-19/CTS/082

January 22, 2019

To

All CTS NAS access Banks

Transport layer security (TLS) update

In order to secure all communications between National Archival services (NAS) server and bank servers, it has been decided to restrict access for TLS and SSL versions for migration to TLS1.2 protocol. Steps for implementing this at banks' end are given in Annexure I.

Member banks are advised to take note and make necessary changes in their internal system with immediate effect. The access restriction will be placed from **February 15, 2019** and with effect from the said date NAS access will not be available to banks if the TLS1.2 protocol is not enabled.

Please note the changes is applicable for all the URLs of NAS including cheques query, reports and Admin (web sat) login.

In case of any further clarifications, Please write to ctschennaisupport@npci.org.in

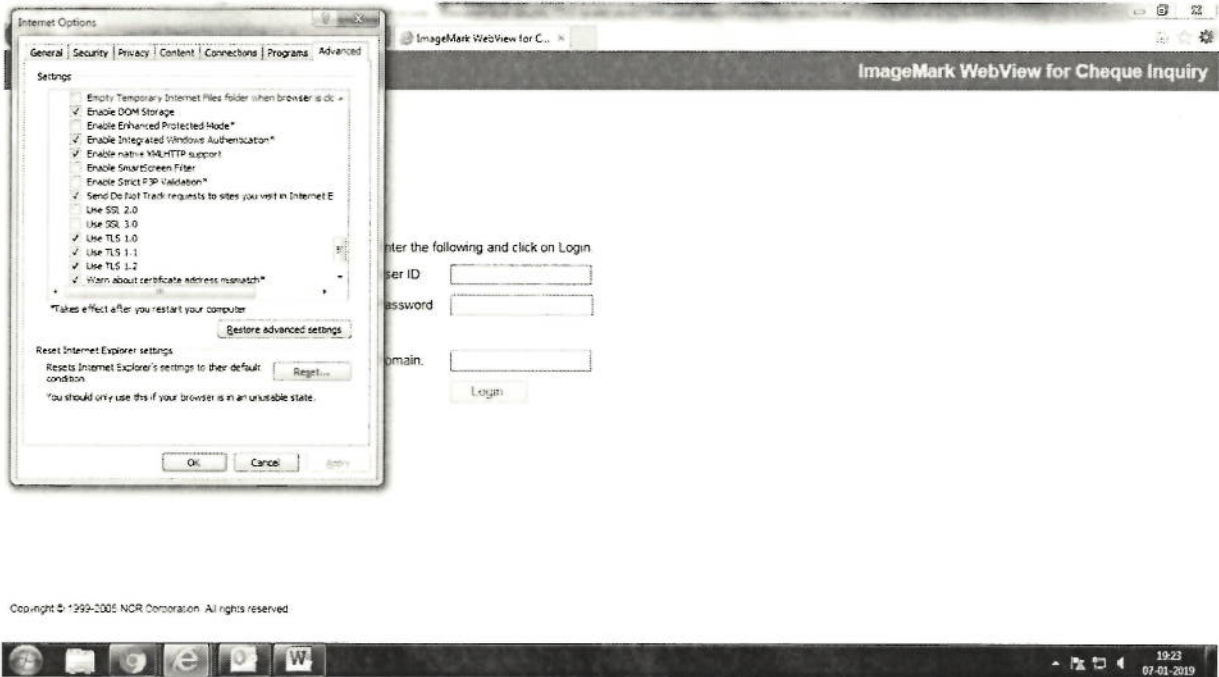

With warm regards

(Giridhar G M)
SVP - NACH & CTS operations

Annexure I

Open Internet explorer → Go to “Internet Option” → Advanced tab → Security (TLS1.2 should be enabled/ticked)
